

## Assert the lines

Siding created by micro-stamping, carraïne enables to play with the symmetry and the balance of the lines using the space between the waves.

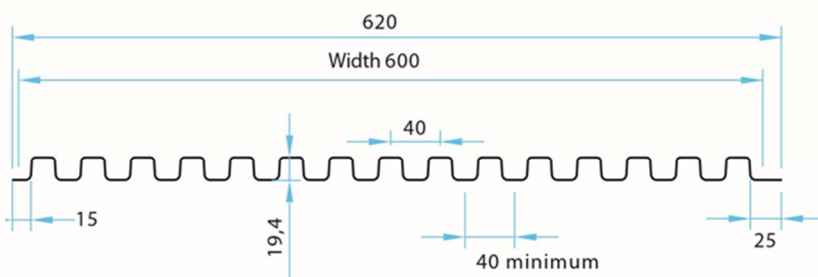

Thanks to its beautiful neutrality and its aesthetic coherence, it gives to the project an obvious personality while still meeting more conventional architectural trends.

CONNESTABLE – Architect : Viguiet.

### The concept

Carraïne is a decorative facade intended for facades, ceilings or partitioning.

#### ● Profile

Maximal length : 3 500 mm  
 Minimum width between 2 steps : 40 mm  
 Height : 19,4 mm  
 Standard width : 600

	Thickness	Weight
Steel	0,75 mm	-
Krystal	0,75 mm	-
Aluminium	1 mm	-

#### ● Implementation and fixing

Carraïne panels must be installed following the professional rules that define the manufacturing and the implementation of metal claddings. The recovering of the panels must be done following their width.

#### ● 3 different materials

- Galvanised steel**
  - Pre-coated steel
  - Post-coated steel with polyester powder paint
- Krystal**
- Aluminium**

#### ● Tailored-made

##### Perforation possible

**Colours available** : COLORISSIME ARVAL, RAL.  
 The different colours and surface aspects are subject to feasibility investigations from our technical team.

**The width and the intervals is modifiable but need to be studied**
